25X1

2. A total of 50 units were inspected and 2 were found defective. Serial #8057 had a shorted condenser C-3. Serial #8070 had a broken dial mask and inoperative receiver. These defects represented a reject rate of approximately 4% which is not considered excessive by the Government. It was then pointed out by that every effort be made to insure this low rate of rejects. At the same time, it was mutually agreed that the specifications shall call for no frequency multiplication greater than 3 times to produce the power output specified. also left a copy of the amended specification for the Agency to check. Officially, this will be submitted by to the Government in the near future. This consists of one specification with all relevant TAR's and amendments inserted in the proper places.

and [] corrected these defects and the units are now acceptable. A separate report covers the repair of these units for contractual purposes. It is also to be noted that the T&E Section has never received RS-6 units #7998 - 7999 & 8000. This was called to [] attention and the Agency was informed that shipping records from [] do not show these units. Therefore, checks are being made to clarify the situation. Inspection reports DD-250 do not show these units being inspected.
